

GOLD★FEVER

INSTRUCTIONS

Setting Up

- * Empty 1 bag of gravel into each of the box containers, spreading the gravel so it's evenly distributed along the bottom of the container.
- * Add a few pieces of the tiny gold nuggets in with the gravel.
- * Now add water into each container. 1" to 2" (4 to 5 cm). Water level should be just above the gravel. If you don't want to carry the container to the nearest water supply then fill a bucket of water and take it to where you have situated the container.
- * If available place a plastic table cloth (or other covering) over the table and position the box containers at the front of the table for easy reach.
- * Display the prizes (gold medals or gold badges) on the table
- * Display your selling prices

How the activity works

- * Parent/Child pays to pan for gold (it's best if customers pay before commencing the activity, to avoid confusion of whom has paid and who has not.
- * Once they have paid they are handed a stainless steel sieving pan which they can use to sieve through the gravel to find the tiny gold nugget pieces.
- * The child sieves through the gravel until they have found 6 pieces of gold. (Please note that the child should hold onto each piece of gold until they have collected all 6 pieces). Once they have handed 6 pieces of gold to you, you can present them with their prize.
- * This activity as been timed for approximately 7 to 10 minutes for each child to find 6 pieces. Although we have done our own tests, we would appreciate your feedback.
- * If you want to lower the time it takes for each child simply add a few more pieces of tiny gold nuggets, to increase the time it takes to do the activity take some gold pieces out.
